OBJECTIVE

With over a year of experience in **software development**, I specialize in building **scalable full-stack web applications** using modern technologies. I have hands-on experience developing **RESTful APIs**, managing databases with **MongoDB**, **Supabase**, and **PostgreSQL**, and deploying applications in **cloud environments**. On the frontend, I've contributed to **component-driven design systems**, implemented **micro-frontend architectures**, and focused on **accessibility and performance**. I also bring interdisciplinary expertise in **deep learning** and **geospatial analytics**, building **AI-powered solutions** for satellite imagery analysis. Currently, I'm exploring how **AI and web development** can converge to create **smarter, more efficient applications**. I'm driven to contribute to **impactful, end-to-end software solutions** that deliver real value.

EDUCATION

Bachelor of Computer Science

2021 – 2025

COMSATS University Islamabad, (Lahore Campus)

Relevant Coursework: JavaScript Course by Jonas Schmedtmann, Machine Learning Specialization by Andrew Ng

TECHNICAL SKILLS

Languages: JavaScript, Typescript, Python, Java, C, SQL ·

Frameworks: React.js, Next.js, Node.js, TensorFlow, Keras

Tools: Git, GitHub, Strapi CMS, PostgreSQL, MongoDB, Google Earth Engine, Material UI, Tailwind CSS

PROFESSIONAL EXPERIENCE

Frontend Developer

Sep 2024 – Dec 2024

TKTurners

- Developed two full-stack applications using **Next.js** and **Strapi CMS**: an Arabic Learning Management System (Muddersac) and a rental platform (SparkHost)
- Implemented responsive UI components using **Material UI** and CSS, ensuring cross-browser compatibility
- Integrated **RESTful APIs** with a Strapi backend and **PostgreSQL** database
- Implemented internationalization (**i18n**) with RTL support for Arabic content
- Converted **Figma designs** into pixel-perfect, responsive web interfaces

ACADEMIC PROJECTS

TerraMark – Field Boundary Identification via Satellite Imagery

Final Year Project

- Developing a **geospatial intelligence system** to resolve **agricultural field boundary disputes** in Pakistan using **satellite imagery analysis**
- Training **convolutional neural networks** (**ResNet50**, **ResNet101**, **SEResNet50V2**) for **semantic segmentation** of agricultural parcels

- Utilizing **EuroCrops dataset**, **Google Earth Engine**, and **OpenEO platform** for **data preprocessing** and analysis
- Evaluating model performance using **Jaccard Coefficient** for **spatial accuracy assessment**
- Processing **high-resolution satellite imagery** for automated **field delineation**

NutriQuest – Nutrition Tracking Mobile Application

Mobile Development Course

- Built a **Flutter**-based mobile application for **daily nutrition tracking** and **calorie management** using **Dart**
- Implemented **food database integration** via **RESTful APIs** with automatic **calorie calculation** for added foods
- Designed a **user-friendly interface** using **Flutter widgets**, including **ListView**, **Chart** components, and **Forms** for food logging
- Enabled **real-time tracking** of nutritional data and **personalized dietary goals** using **state management** with **Provider**
- Applied **responsive UI principles** for consistent experience across Android and iOS devices

FREELANCE PROJECTS

Laundry Orbit – Laundry Service Web Application

Apr 2025 – Jul 2025

- Developed a **full-stack** laundry service platform using **React.js**, **Node.js**, **Express**, and **MongoDB** with **MVC architecture**
- Implemented secure **JWT-based authentication** and **authorization** across client and admin dashboards
- Designed dynamic **service ordering workflows** with **Material UI (MUI)** for a responsive and modern **UI/UX**
- Ensured structured and scalable codebase with **route-model-controller (RMC)** architecture for backend APIs

Swift Auto Transport – Nationwide Vehicle Shipping Website

Jul 2025

- Delivered a complete **production-ready website** in just **7 days**, from design to deployment, for a U.S.-based auto transport brokerage
- Built with **Next.js** for **server-side rendering (SSR)** and routing, **CSS** and **Material UI** for responsive design, and **Three.js** for interactive visual effects
- Integrated **Resend** for seamless email communication and **SEO-ready content** to boost visibility
- Features include: **instant quotes**, **enclosed/open transport options**, **insurance details**, **state-specific service pages**, and **testimonials**
- Demonstrated strong **time management**, working under pressure to restore and modernize the client's web presence rapidly
